## About me

To me, interdisciplinary research is the key to understanding and improving the world. I hope to contribute from a fundamental level by developing expertise on applied methodology and statistics.

I am very passionate about 'dull' or 'difficult' topics like statistics, programming, and epistemology. I want to bring insights from different disciplines and methodologies together to achieve a more comprehensive understanding than the disciplines by themselves can provide.

I want to convince (future) applied researchers that proper scientific research practices are not only necessary, but also fun!
